Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-18, 24, drawn to assembly or disassembly of messages having address header, classified in class 370, subclass 474.
 - II. Claims 19-23, drawn to message having address header in which information data is organized in one or more bytes preceded by an identifier indicative of source or destination stations, classified in class 370, subclass 471.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the invention I is drawing to a method and structure and network for assembling a forward link traffic multiplexing frame for transmission of a plurality of a packet a radio link. The subcombination has separate utility such as the invention II is drawing to a method for detecting a packet in a forward link traffic multiplexing frame that is destined to a terminal.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
